Email	14775369722@163.com

Profile

Computer Science undergraduate focused on practical AI workflows. Current interests include applied AI, computer vision, local LLM applications, and turning models into usable interfaces, scripts, and delivery flows.

Selected Projects

Wafer Defect Detection

YOLOv8, Streamlit, Aliyun PAI

Industrial-style computer vision prototype focused on small-target defect detection and the workflow from cloud training to Windows local delivery.

Silicon Diaries

Ollama, Qwen/Llama, psutil, Python Logging

Local LLM experiment that monitors system signals such as CPU, memory, and uptime, then generates first-person system diary entries.

AI Campus Assistant

LLM, workflow design, knowledge base, structured output

Prototype direction for organizing campus notices, deadlines, courses, and activity information into more actionable AI-supported workflows.

Skills

Languages	Python, C++, TypeScript, JavaScript
AI / ML	PyTorch, YOLO, OpenCV, Local LLM, Ollama
Application	Streamlit, Python Logging, psutil, API integration
Tools	Linux, Git, Vite, Vercel, Aliyun PAI

Currently Building

Improving the public portfolio, documenting two case studies, refining local LLM automation ideas, and making project repositories easier to run and evaluate. Claims are intentionally kept conservative until public evidence is ready.

Updated June 2026. This resume intentionally avoids unverified awards, internships, or metrics.
