Profile

CS undergraduate focused on practical AI systems: computer vision prototypes, local LLM workflows, and small full-stack demos. I care about the path from problem framing to data, model, interface, reproducible setup, and local delivery.

Featured Projects

Wafer Defect Detection

YOLOv8, Streamlit, Aliyun PAI

Computer vision prototype for small-target defect detection, Streamlit demo UI, and cloud-to-local delivery workflow. Status: prototype / local demo direction.

Silicon Diaries

Ollama, Local LLM, psutil, Python Logging

Local LLM experiment that turns CPU, memory, uptime, and runtime signals into first-person system diary entries. Status: experimental local demo.

AI Campus Assistant

LLM, Workflow, Knowledge Base, Structured Output

In-progress workflow concept for organizing campus notices, deadlines, courses, and activities into structured outputs. Status: in progress, mock/local demo first.

Skills

Languages	Python, C++, TypeScript, JavaScript, Java
AI Systems	YOLOv8, PyTorch, OpenCV, Local LLM, Ollama, Structured Output
Full-stack Prototypes	React, Vite, TypeScript, Tailwind CSS, Streamlit, Vercel
Workflow & Tools	Git, Linux, Python Logging, psutil, Aliyun PAI, README / Case Study

Currently Building

Improving public case studies, documenting real project evidence, refining local LLM automation ideas, and making repositories easier to run and evaluate.

Updated June 2026. This resume avoids unverified awards, internships, production deployments, or metrics.
